To: Prospective Green Zip Clients

As Regional VP/Division Manager at Brasfield & Gorrie, I am responsible for vetting and introducing innovations in the commercial construction industry to our clients.

Recently, we were asked by one of our hospitality clients to vet a drywall innovation called Green-Zip, a patented process and product that allows the disassembly of interior drywall partitions. All of the same materials relative to conventional drywall construction are used, with the exception of the joint tape on non-load bearing walls.

Installing Green-Zip's fiber carbon drywall tape at the factory joints of interior walls creates two specific advantages. First, a significant percentage of the walls can be removed, relocated and reused, creating a significant cost savings when reconfiguring interior space. Second, the use of Green-Zip can create a significant financial benefit as the cost of the walls (in addition to many construction elements attached to and behind the walls) can be depreciated in five years, as opposed to 27.5 or 39 years. This may result in a significant financial benefit for our clients.

We were so impressed with Green Zip, we used it our new Dallas office, and experienced no construction delays or budget increases whatsoever. We are very satisfied with the results and plan to recommend Green-Zip to our clients.

Please feel free to contact me with questions.

To Whom It May Concern:

I am writing this letter in support of an innovative process in our interiors industry called Green-Zip Partition Systems. Our company has been a leader in the drywall and ceilings industry for over 73 years and, when a product like this makes its debut, we are there. Several building owners have availed themselves to the Green-Zip System, which makes what used to be a fixed system become demountable. With the use of a special 'zip' drywall tape, screws can be backed out and the sheet of drywall removed and reused. It saves time, money, and lends itself to the green environment that is helping our industry do its part for sustainability.

Our men especially like the system when it involves demolition of existing walls because it eliminates the need to use a hammer and saw to break up the sheets of gypsum for removal via the elevator. With the screws backed out, the sheet of gypsum board is removed, stacked, and ready for use in another wall system.

We recently built our new 50,000 SF headquarters building and used the Green-Zip Partition System everywhere. To me, it's a simple solution and one that everyone should take advantage of! The financial benefit is consistent with the projections we received, which are significant.

Please contact me if you'd like more information.

Sincerely,

R. Stan Marek

Re: Our experience with Green-Zip Partition System, a seamless demountable drywall

Intertec Construction, Inc. is considered by many to be one of Houston's premier interior general contractors. With that said we have a responsibility to our clients to provide state of the art products that are cost effective and lend themselves to green building.

12 years ago, one of the **nation's Fortune 100 Companies** with headquarters here in Houston, selected Intertec Construction, Inc. as their interior general contractor. In 2008 the "Green-Zip Tape Partition" system was introduced to our client and after a **lengthy evaluation** which included **facility operation savings, huge tax benefits** and **LEED Certification**, it became the building standard for their new twin office tower headquarter buildings.

Since 2008 they have experienced several hundred office reconfigurations. The remodel projects range from enlarging a single office due to a promotion to full floor reconfigurations.

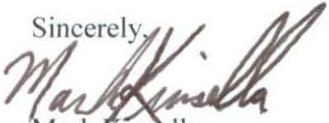

All the benefits originally evaluated have proven themselves over and over again.

1. Reuse of materials- virtually all materials are reused including cut pieces which are used for top out of deck high walls.
2. No inventory required- when new drywall is required there are many distributors available in the Houston area.
3. No long lead times- unlike pre-manufactured movable walls, there is no ordering special panels and waiting for several weeks for delivery.
4. Greatly reduced waste costs- we recently remodeled a ½ floor and the entire project did not even use 1 dumpster and almost all of the debris was other trades.
5. Labor savings- no more loading up trash buggies, waiting for freight elevators, emptying the buggies, waiting for elevators to return with empty buggies.
6. No overtime- labor costs have been further reduced by virtually eliminating overtime or after hours work.
7. Maximum Employee Production/Profits-Areas have been remodeled during regular business hours while people work undisturbed 10' to 15' away from the construction area. This is perhaps the most valuable advantage as normal drywall must be demolished with sledge hammers and saws which is very disruptive to the occupants
8. LEED Gold Certification- for the entire project.

Having being involved in the construction industry for over 35 years, one rarely sees innovations in tried and true systems such as drywall. The Green-Zip Tape Partition system provides several innovations which makes us proud to install the Green-Zip Tape Partition system.

Should you have any questions please feel free to contact me.

Sincerely,

President, Huffman Drywall

To Whom it may concern:

I am writing this letter to share my experience with a strategic innovation in the interiors industry called Green-Zip Partitions. I learned about Green-Zip several years ago, as my company was chosen as the drywall contractor for a medical office building that chose to incorporate Green-Zip Tape on their interior walls.

In my role as President of Huffman Drywall, and as a multi-family and hospitality developer/owner, I have the unique experience of having used Green-Zip Tape on my client's medical office building, as well as in my own personal multi-family and hospitality developments. Green-Zip is not only a superior drywall tape from the mechanical side, but its use will allow me the flexibility to adapt my buildings to meet changing demographics down the road, if that need arises.

In addition to these sustainable benefits, the financial benefits associated with accelerated depreciation are valuable to me as an owner, and could potentially add to the building's value in the event of a sale.

Green-Zip has caused no delays to the construction schedule relative to other joint compound tapes. I recently used Green-Zip Tape on a 72-unit student housing project in Pittsburg, Kansas (completed in July 2015) as well as a 128 unit multi-family complex in Little Rock, AR which will be completed in the 4th quarter of 2015.

Feel free to contact me if you have any questions about my experience with Green-Zip.
